

# Elf Bar Partners with Recycling Company to Improve Sustainability - Leading the Vape Industry's Green Revolution

In a move towards enhancing sustainability, vape supplier Elf Bar has recently introduced the GreenPowercycle recycling programme in collaboration with Recover, a leading UK lithium recycling company. This initiative aims to tackle the environmental impact of vape products by implementing an effective recycling system. With the GreenPowercycle recycling scheme, Elf Bar has placed dedicated recycling bins in its retail partners' stores across the UK, providing a convenient and responsible solution for the disposal of used Elf Bar products.

## A Step Towards a Greener Future

---

The GreenPowercycle recycling program ensures that every collected device undergoes a meticulous recycling process. When customers drop off their used Elf Bar products in the specially designated recycling bins, these items are later transported to an Authorized Approved Treatment Facility (AATF) certified organization. Here, they are meticulously disassembled to ensure that every component, including plastics and metals, can be efficiently recycled.

## Retail Partners Embrace the GreenPowercycle Initiative

---

The GreenPowercycle initiative has already gained significant traction, with several prominent vape retail partners joining forces to promote sustainable practices. Retailers such as MyCigara, Evapo, and Tidal Vape have installed dedicated recycling bins for used Elf Bar products in their UK-based stores, making it easier for customers to dispose of their vape devices responsibly. This collaborative effort signifies a crucial step towards a more sustainable vaping industry.

## Transforming Components into Reusable Raw Materials

---

John Dorman, the chief executive officer of Recover, highlights the significance of Elf Bar's commitment to recycling: "Through the comprehensive recycling process, all components, including plastics and metals, are safely transformed into reusable secondary raw materials." This approach sets Elf Bar apart from other e-cigarette makers, as they are the first to achieve such a level of sustainability and responsible waste management.

## Environmental Stewardship at the Core of Elf Bar

---

Elf Bar's dedication to environmental stewardship extends beyond its recycling program. Priya Liu, the director of ESG (Environmental, Social, and Governance) at Elf Bar, emphasizes the brand's commitment: "From R&D to business operations, environmental stewardship permeates all aspects of our business. We are committed to achieving zero waste diversion to landfills and are continually developing our recycling program." These efforts demonstrate Elf Bar's holistic approach to sustainability, integrating eco-friendly practices into every facet of their operations.

## A Vision for the Future

---

Elf Bar has set ambitious goals for the future. By 2025, they aim to establish a full-cycle recycling system that is mature, dismantlable, and reusable, marking a significant milestone in closed-loop sustainable development. Through continuous innovation and collaboration with industry partners, Elf Bar strives to lead the way towards a greener future for the vaping community.

## Frequently Asked Questions (FAQs)

---

### 1. How can I participate in the GreenPowercycle recycling program?

To participate in the GreenPowercycle recycling program, simply visit any of the retail partners, such as MyCigara, Evapo, or Tidal Vape, that have installed dedicated recycling bins for Elf Bar products. Drop off your used Elf Bar devices in the recycling bins, and they will be properly recycled, ensuring a more sustainable future for the vaping industry.

### 2. Can I recycle my Elf Bar products at any location?

Currently, the GreenPowercycle recycling bins are available only in the UK-based stores of Elf Bar's retail partners. However, as the program expands, there may be more locations where you can conveniently recycle your Elf Bar products. Keep an eye out for updates and additional participating retailers.

### **3. What happens to the components of the recycled Elf Bar products?**

The components of the recycled Elf Bar products undergo a rigorous disassembly process. Plastics and metals are separated and transformed into reusable secondary raw materials. This ensures that valuable resources are not wasted and can be repurposed for other applications, reducing the environmental impact of discarded vape devices.

### **4. Are all Elf Bar products eligible for recycling?**

Yes, all Elf Bar products can be recycled through the GreenPowercycle program. Whether you have used Elf Bar disposable vapes, pod systems, or other devices, you can contribute to sustainability by responsibly recycling them. Remember to check for the dedicated recycling bins in participating retail stores.

### **5. What is Elf Bar's vision for sustainable development?**

Elf Bar aims to achieve closed-loop sustainable development by establishing a full-cycle recycling system that is mature, dismantlable, and reusable by 2025. Their commitment extends beyond recycling to various aspects of their business operations, ensuring environmental stewardship from research and development to the end consumer. Elf Bar is dedicated to minimizing waste and maximizing resource efficiency in the vaping industry.
